Work Experience

Software Engineer *June 2025 – Present*

Oleria Corporation *Bengaluru*

- Designed and developed scalable SaaS integrations (Workday, Google Drive, Oracle HCM) using REST APIs and microservices architecture, enabling data ingestion for 250K+ accounts and 1M+ resources and contributing to 20% growth in overall integrations.
- Built production-grade remediation workflows with AWS Step Functions, ECS Scheduler, and ECS Tasks to automate security actions (disable users, revoke access) across large-scale identity systems, supporting 250K+ accounts and 1M+ resources.
- Implemented checkpointing and recovery mechanisms for distributed ECS workflows, reducing redundant reprocessing by 60–70% and improving reliability of long-running orchestration pipelines.
- Developed an on-prem agent remediation protocol from scratch, enabling secure execution of remediation actions inside customer environments while maintaining strong security and isolation boundaries.
- Contributed to CDC (Change Data Capture) pipelines for real-time data synchronization and change tracking across distributed systems using Kafka and messaging queues.
- Built an agentic workflow using reusable skills and LLMs to automate SaaS plugin development, reducing manual implementation effort by 40–50% and accelerating delivery of new integrations.
- **Technologies:** Go, AWS (Step Functions, ECS, SQS, DynamoDB, DocumentDB, CloudWatch), MongoDB, Neo4j, Kafka, REST APIs, Microservices, Git, GitHub Actions, Claude / LLM-based agentic workflows

Programmer Analyst *Nov 2020 – Sept 2022*

Cognizant India *Hyderabad*

- Developed and optimized 10+ complex Google SQL scripts for multi-client databases, improving query performance and efficiency by 30%.
- Worked on a .NET MVC full-stack web application, implementing backend business logic and UI components in C#, focusing on maintainability, scalability, and clean API design.
- **Technologies:** C#, .NET MVC, SQL, REST APIs, Git

Technical Skills

Programming Languages: Go, Java, Python, C++, C, SQL, JavaScript/TypeScript
Core CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, System Design, Distributed Systems, Complexity Analysis
Backend & APIs: REST APIs, GraphQL (familiar), Microservices, Service-Oriented Architecture, API Design Patterns
Cloud & Infrastructure: AWS (Step Functions, ECS, SQS, DynamoDB, DocumentDB, RDS, CloudWatch), Kafka, Public Cloud Architecture
Databases: Relational (SQL/RDS) and Non-Relational (DocumentDB, DynamoDB, MongoDB, Neo4j) — data modeling & optimization
DevOps & Tools: Git, GitHub, GitHub Actions (CI/CD), Postman, Agile practices
AI & Automation: LLMs, Claude, Agentic Workflows, Prompt Engineering

Education

International Institute of Information Technology (IIIT), Hyderabad *July 2023 – May 2025*

M.Tech in Computer Science & Engineering

Government College of Engineering and Leather Technology (GCELT), Kolkata *July 2016 – July 2020*

B.Tech in Computer Science & Engineering

Coding Profiles

LeetCode: 1931 rating (Knight) | **Codeforces:** 1283 rating (Pupil)

Key Projects

Peer-to-Peer File Sharing System

TCP Sockets, SHA-1, Multi-threading, Distributed Systems

- Designed and implemented a decentralized P2P file-sharing system with multi-tracker synchronization, peer discovery, and parallel downloads from multiple peers.
- Applied SHA-1 hashing for chunk-level integrity verification and built multi-threaded concurrent transfer logic — demonstrating strong distributed systems and systems programming fundamentals.

Association Rule-Based Movie Recommender System

Python, Pandas, NumPy, Matplotlib

- Processed the MovieLens 100k dataset to extract frequent itemsets and generate recommendations using Apriori and FP-Growth based on support and confidence metrics.
- Visualized rule relationships and frequent movie pairings to improve interpretability of the recommendation engine.

Achievements

- Secured **98.13 percentile** in **GATE 2023** (Computer Science).
